

What is Infrastructure? Infrastructure is the roads, bridges, pipelines, cables and networks that keep us moving and supplies our water, electricity, gas and broadband.

We are launching a centre for Civil Engineering, Highways and Infrastructure Skills. This centre will be based within the existing Further Education Colleges in Surrey. The centre will provide professional courses such as Quantity Surveying, Civil Engineering and Construction Management along with vocational courses and professional development training.

We are looking to create an image that reflects the Infrastructure and attracts students into this exciting and rewarding industry. Please let us know what you think of the following names and logo's?

Please click on the link below or scan the QR code to complete our survey– it only takes 5 minutes.
